Product Manager (AI & Intelligent Systems) | Building Interactive,
Agent-Based User Experiences | Ex-Marketing Leader
Chennai, Tamil Nadu, India

Summary

I'm a Product Manager focused on building intelligent, user-centric products that use AI to simplify complex problems and improve decision-making.

I work across the full product lifecycle—from problem discovery and product strategy to execution, experimentation, and iteration. I've led the development of AI-powered, interactive and agent-based experiences that guide users through tasks in a natural, intuitive way.

My background in marketing and growth gives me a strong advantage in understanding user intent, adoption barriers, and real-world usage. This helps me build products that are not only technically sound but also easy to adopt, explain, and scale.

Focused on bringing product thinking, AI, and deep user understanding together.

Experience

Netcore Unbx
4 years 4 months

Senior Product Manager
December 2024 - Present (1 year 5 months)

- Own end-to-end product lifecycle, from identifying user problems to delivering scalable solutions
- Lead the development of AI-powered features, including interactive and agent-based experiences
- Translate ambiguous problem spaces into clear product requirements and priorities
- Work closely with engineering, design, and data teams to ship high-quality product increments

- Define success metrics and continuously iterate using qualitative and quantitative signals
- Balance user needs, technical constraints, and business goals in product decision-making
